

Table 3: Model Comparison Results

Model	Description	R ²	ΔR ²	AIC	BIC	Key Findings
Model 1	Direct effects only	0.411	—	86,419	86,435	Strong capability–wellness relationship ($\beta = 1.318^{***}$)
Model 2	AI interest interaction	0.411	<0.001	86,399	86,432	No meaningful AI moderation ($\beta = -.039$)
Model 3	Three-way interaction	0.42	0.009	86,087	86,151	Significant three-way effect ($\beta = .085^{**}$)

Note: $N = 23,333$ for all models. ΔR^2 represents incremental change from previous model. Lower AIC/BIC values indicate better model fit. *** $p < .001$, ** $p < .01$
